

The OPC Router

The OPC Router is a software solution that connects your machines and systems.

Connectivity between facilities, devices and systems automates workflows and optimizes processes.

Simple connectivity for industrial production into cloud systems such as Azure, AWS, IBM, Google IoT Core, and Siemens MindSphere.

Intelligent networking of processes and machines enables valuable Industry 4.0.

Application Diversity

								
SAP	MQTT Client	REST API	OPC UA Client	OPC UA Server	OPC UA Pub/Sub	SQL Server	Apache Kafka	
								
ERP / SOAP Web Services	Telegram Bot	Email notification via SMTP				Mongo Database	Influx Database	MySQL / Maria Database
								
ORACLE Database	Open Database Connectivity	SQLite Database				Zebra Labelprinter	Domino Labelprinter	Videojet Inkjet Printer
								
Wolke Inkjet Printer	Windows Printer	Network File Access	Generic Barcode Reader	RFID-AutoID (OPC UA)	Heidenhain CNC	Microsoft Excel	SAP HANA	

With its multitude of Plug-ins, the OPC Router provides flexible use. The connection of the individual system components is done via drag & drop on a graphical interface - no programming knowledge is mandatory.

Function & Benefits

Operating like a universal translator, the OPC Router can easily, quickly and without expert knowledge or programming skills be integrated into existing automation and production environments. It pushes digitization to a new level.

- Automated data exchange
- Process optimization due to transparent processes
- More flexibility in production through optimized utilization of plants and machines
- Productivity increase, cost reduction and quality assurance
- Connects the OT and IT level with each other
- Scalability
- Platform independence
- Simple operation of the graphical user interface

Features & Add-ons

The OPC Router is a well-proven industrial software with a continuously market-oriented development. Due to the modular structure, you will benefit from individual customization options and an attractive price-performance ratio.

- Single software for your entire data exchange
- Outstanding stability and security with simultaneously high performance
- Easy handling via drag & drop
- Status and diagnosis of data transfers
- Modular structure using Plug-ins
- Supports Windows, Docker and Kubernetes

Add-ons & Enterprise Features:

- Prevent data loss with Store & Forward
- Fail-safe and redundancy concept
- Innovative software made in Germany
