

### Version Control/SmartCompare:

All program changes are recorded and can be tracked using graphical, tabular or text-based version comparisons. Any version can be easily and quickly restored at any time.

### Automatic Backup:

Automatic backups save time and guarantee that your data is always safeguarded. Control programs are regularly compared to their projects to make sure that no unauthorised changes have been made. If differences are detected, the appropriate personnel will be notified by email. Non-networked facilities can also be integrated using the mobile BackupClient.

### Archiving/Documentation:

100% transparency and traceability guaranteed by integrated documentation and complete change history. Errors and changes to data can be easily detected. See at a glance WHO changed WHAT, WHERE, WHEN and WHY.
